Preamble

The draft Belfast Metropolitan Area Plan (BMAP) was published in 2004. This introduced Policy OS 2: Community Greenways and designated 28 Community Greenways in the District Proposals. A public Inquiry was conducted by the Planning Appeals Commission (PAC) to consider draft plan objections, including the Community Greenway Policy and Plan Designations. The Public Inquiry concluded in May 2008 and the Department received the last of the PAC Reports, containing their recommendations in January 2012.

In relation to Community Greenways, the PAC recommended to the Department that the adopted BMAP Community Greenway Proposals should provide:

- Accurate details of the routes of designated Community Greenways and criteria for their layout; and
- The amplification text relating to policy OS 2 should make it clear that development proposals involving amendments to the identified routes will be acceptable provided that the alternative arrangements maintain the overall integrity of the route and meet the designation’s layout criteria.

The Department has now considered the Report from the PAC and is publishing this Community Greenway Clarification Booklet and amending the Community Greenway Policy to address the PAC recommendations. In the adopted BMAP, the Community Greenway Policy OS 1 replaces Draft Plan Policy OS 2. The Department is designating 31 greenways in the adopted plan, an increase of three from the draft plan.

This document should be read in conjunction with the Belfast Metropolitan Area Plan 2015 and in particular, with the adopted BMAP Policy OS 1: Community Greenways.
Introduction

Community Greenways are part of the green space network, which enhance existing open space provision by linking urban green space areas and the countryside. They can serve recreational, ecological, environmental and visual amenity roles.

The RDS 2035 highlights the importance of community greenways and require these areas to be protected and enhanced as part of the network of open spaces in the BMUA (SFG5: Protect and enhance the quality of the setting of the BMUA and its environmental assets).

Planning Policy Statement 8 (PPS 8): Open Space, Sport and Outdoor Recreation sets out regional planning policies for open space, sport and outdoor recreation and refers to the strategic function of open space as ‘defining and separating urban areas; providing community greenways, ‘green lungs’ or landscape buffers within urban areas; better linking of town and country; and serving recreational needs over a wide area;’. In reference to zoning for future open space development, PPS 8 requires the Department to take into account ‘the importance of protecting linear open spaces such as pedestrian and cycle routes, community greenways, former railway lines and river and canal corridors, many of which are valuable in linking large areas of open space;’.

The Belfast Metropolitan Area Plan contains Policy OS1 for Community Greenways in Volume 1, Plan Strategy & Framework and has designated 31 Community Greenways in the relevant District Proposals. It should be noted that whilst not detailed in this document, Urban Landscape Wedges also function as Community Greenways.

This document offers supplementary guidance for the consideration and operation of Community Greenway designations contained within the Belfast Metropolitan Area Plan.

Community Greenways serve a variety of functions including:

- Offering pedestrians and cyclists the opportunity to travel from one green area to another via pleasant green surroundings; and
- Providing an ecological haven and green linkage along river corridors, pathways and disused railway lines.

Private open space can also serve an important role as part of the greenways. Even where public access is not permitted, the green space can still provide important linkages and visual amenity within the urban area. Where public access is not available, an alternative pedestrian route is detailed to provide a means of circumventing the private areas. These routes are intended to retain an appreciation of the greenway route.
Since the publication of Draft BMAP, various groupings including Community Organisations and District Councils have embraced the greenway concept and have carried out projects to develop these greenways such as:

- The development of the Comber Greenway which has a pedestrian and cycle path along the greater part of the abandoned Comber to Belfast railway line.

While a number of the Greenways have existing formal pathways along their entire length, others are more aspirational and would benefit from further investment/development. Therefore, protection of the route is important to allow potential development of formal provision as a medium to long term aspiration. Throughout this document, in instances where access is restricted, appropriate short diversions are suggested within the grey boxes.

As a number of the undeveloped routes are aspirational, the Department does not consider it appropriate to specify individual greenway land-take. Instead, it considers the greenway route, as defined in the adopted Plan map and detailed in the supplementary guidance, sufficient.

In instances where permission is being sought to develop adjacent to a designated Community Greenway, development proposals should include, where appropriate, open space linkages to designated Community Greenways.

**Community Greenway Role**

Community Greenways are intended to provide corridor linkages between urban areas of open space and between urban areas of open space and the countryside/coast.

**Community Greenway Layout Criteria**

Criteria for Community Greenway layout should meet at least one of the following:

- Offer recreational linkage;
- Offer ecological/environmental linkage; or
- As a source of visual / recreational amenity.
